

CONSENT FOR COVID-19 TESTING OF MINOR CHILD

We at Grandstreet Theatre want to offer your minor child free COVID-19 testing to help keep our community safe.

The COVID-19 worldwide pandemic is still a national emergency. To help protect people in our local community, Grandstreet Theatre will follow recommendations from the U.S. Centers for Disease Control and Prevention (CDC) and other state and local public health authorities for COVID-19 testing.

Knowing if your minor child has COVID-19 can help you make decisions to protect your child, yourself, and other people in your family or community.

We hope that you will agree to allow your minor child to take a COVID-19 test. This test is free for you. The test does not include any medical processes that should pose a major risk for your child.

WHAT YOU NEED TO KNOW

- **How is the sample collected?** There are two possible methods:

Nasal Swab Sample: The testing involves collecting one or more nasal swabs. We will tell or show your minor child the safe way to collect the swab. We will give your child a swab kit and watch your child gently swab the inside of their nose to collect the swab. Most people do not have problems with nasal swabs, but some people may bleed slightly or become faint or feel sick. If this happens to your child, we will want your child to stay with us for a few minutes to be sure that the bleeding has stopped or that your child feels better.

Saliva Spit Sample: We will ask your child to provide a sample of their saliva (or “spit”). We will give your child a sample kit. Your child will be asked to take a small drink of water, then told not to eat, drink, or chew anything for at least 30 minutes before we ask your child to collect the sample. When your child is ready, we will ask them to allow saliva to collect in their mouth, then fill the sample container to the level shown. We will tell them to screw the cap on tightly. The saliva sample can be quickly and safely collected within a minute and does not present any physical risk to your child.

- **Testing the swab or saliva sample for SARS-CoV-2.** We will take your child’s swab or saliva sample and send it to a qualified lab that will test it for SARS-CoV-2. The lab will use a test called a “molecular amplification assay” to see if the swab contains evidence of SARS-CoV-2, the virus which causes COVID-19.
- **What constitutes evidence of virus?** If a person is infected with SARS-CoV-2, the virus makes copies of itself in the body. These are markers of the virus. The lab test quickly identifies the presence of SARS-CoV-2, the virus that causes COVID-19.

How will I be told about my child’s testing results? The testing results will usually be ready within 2-3 business days from the time the test was taken. You must sign up for the Guardian/Participant portal to be able to view your child’s test results. Otherwise, the Health Providers who ordered the test will tell you if your child’s test result is positive for presence of the virus. The Health Provider will not contact you if your child’s test result is negative.

- **What are the possible risks and benefits of the test?** As with any test, sometimes there may be a false positive or false negative result. Your child’s test result itself is not a clinical diagnosis of SARS-CoV-2 infection. A formal diagnosis of can only be made by your healthcare provider after they look at all clinical and lab findings. This testing is for you to be aware and to help protect your child, you, your family, and community.
- **Will the test result be kept confidential?** Test results will be kept as private as possible but will be known to the Midwest Coordination Center and the qualified lab. Federal and state public health agencies and/or local Department(s) of Public Health may require that the Midwest Coordination Center or the qualified lab report any positive test results. If your child’s test is positive, your child could be identified through this required reporting.
- **What will be done with my child’s nasal swab or saliva sample?** After all testing is done and your results have been given to you, your nasal swab or saliva sample will be retained for 2 to 7 days, depending on the laboratory.

FOR MORE INFORMATION

- For more information about the collection and “assay” testing processes, please see the Fact Sheet (Patients), Fact Sheet (Health Care Providers) and visit www.testedandprotected.org .
- If you have questions about the testing processes or this consent form for your child, please contact Kal@grandstreettheatre.com at Grandstreet Theatre.

CONSENT OF PARENT OR GUARDIAN

I have read and understood the information in this Consent form about COVID-19 testing. I have had the chance to ask questions and have been given the answers I needed.

I have been provided a copy of the Midwest Coordination Center HIPAA Notice of Privacy Practices.

I authorize Grandstreet Theatre to:

- show or help my minor child to collect their nasal swab or saliva sample,
- have my child’s swab or saliva sample tested through an approved SARS-CoV-2 test process, and
- Allow communication of test results with the approved testing lab, Midwest Coordination Center, or any required federal, state, or local agencies that have the legal authority to obtain testing results that may identify my child.
